

CyberWISER Light is a free, new online self-assessment service that helps organisations to build resilience against growing cyber risks, within and outside the company.

CyberWISER Light significantly lowers the entry barrier to effective risk management especially for the many small firms that don't have time, money or IT savvy staff.

It is composed of two parts, an online questionnaire and an online vulnerability test, and it can be performed in less than 30'.

At the end you get your own free downloadable PDF report on the status of your organisation's cybersecurity.

You can opt for two version of the service

- Cyber WISER LIGHT Fast TRACK VERSION

**Features:**

- No registration required
- Free questionnaire for cyber risk self assessment
- Completion time: 10 minutes

**What will you get:**

- A personalized report on your cyber risk profile based on the answers provided

The Fast Track version consists of a simple questionnaire that collects and assess basic information about your organization and its cyber risk exposure.

The questionnaire can be completed in just 10 minutes and you don't need to register to use this version.

Completing the questionnaire gives you personalised reports with key insights on your cyber risks: download it and use it to define your cyber security strategy. Remember that your risks will evolve with the threat landscape, so repeat the self assessment regularly.

- CyberWISER Light Complete version

# SERVICE CYBER WISER LIGHT

**Features:**

- Registration required
- Free questionnaire for cyber risk self assessment
- Vulnerability testing
- Completion time: 15 minutes

**What will you get:**

- A personalized report on your cyber risk profile based on the answers provided
- A customised report ranking your vulnerabilities, showing just how resilient your IT infrastructure is to cyber attacks

Users of the Complete version service can take advantage of the self assessment questionnaire, as for the Fast Track version, and also opt to take a vulnerability test to understand what, if any, real vulnerabilities are on your web server or infrastructure any time, anywhere. Companies conducting the vulnerability test will get an estimate of the risk impact on their business, a crucial step towards getting smart about cyber security.
