A message from the EC

Cyber training and skills have never been more important.

COVID-19 has accelerated the shift to digitisation and remote working with growing attack surface.

There are practical options to train your staff. Choose options commensurate to you staff's needs.

More opportunities are coming in Horizon Europe: Funding will further advance cybersecurity and build resilience across the European Union.

Today's Takeaways

#1: **Trainers need to help people use technology safely**. Levers and rewards are essential ingredients in any cyber training programmes. Social collaboration is all about creating an interconnected group of trainees.

#2: SMEs have a huge advantage when it comes to **personalising training courses for all their staff**. It's also a not-to-be missed opportunity to remove all the "myths and dark arts" about cybersecurity. Simple slogans. Common terminology.

#3: The four EU pilot projects are building cyber competences: Building blocks for a network for vertical markets, where **strong relationships are crucial to success training**.

#4: Filling the skill gaps is about getting more young people and women involved.Highlight the plethora of opportunities. Remove notion that cybersecurity is only for technical people.
